

Mobile disinfection pan

Art. Nr. 10451/10454/10476

On the long sides, the lateral bordering consists of a 10 cm high edge (filled with foamed material or air). On the front sides, wedge-shaped and flexible ascending ramps which are reinforced with a PVC layer serve as entry. In order to compensate uneven underground and as protection for the disinfection pan, an almost puncture-proof protection mat of geotextile material is included in the delivery.

Optionally, an additional inlay mat can be provided for tyre disinfection. For erecting longer disinfection rows, several disinfection pans can be arranged successively.

Thanks to the wedge-shaped and flexible frame, a jolt-free entry into the pan without loss of disinfectant is possible.

For a quick sole disinfection, the compact foot pan (1 x 1 m) is a suitable solution.

Our mobile disinfection pan has been designed for a quick and mobile application in case of epizootics. The basin can be used as basic module for tyre disinfection systems or for complete disinfection rows for cars and lorries.

Data overview:

- Mobile disinfection pan (collecting tray)
- Quickly ready for use and reusable
- Suited for tyre or vehicle disinfection
- Also applicable as decontamination plant
- Weight: c. 85 kg (incl. protection mat)
- Outer dimensions: c. 14 x 3.6 m
- Inner dimensions: c. 12 x 3.4 m
- Material of pan: PVC polyester fabric, c. 900 g/m²
- Material of mat: polypropylene, c. 385 g/m²
- Lateral foam edge: height c. 10 cm
- Wedge-shaped entry: length 1 m, height 10 cm
- Several disinfection pans can be arranged successively
- Also available as foot tray for sole disinfection

Before starting operation with the disinfection pan, please observe the operating manual!
